Very Happy with my TinyJohn

Frank Auria on **Jun 08, 2021**

Purchased my TinyJohn back in Feb. 2021 received the unit in mid March as promised. It was packaged very well and received everything that I ordered in excellent condition. I installed the unit along with the standard vent kit at the end of April at my off grid cabin. Installation went pretty well had a few questions and the EcoJohn Team was quick to answer them and help me through the install which was actually pretty easy. I followed the start up process in the instructions and everything worked as it should. Had a few minor hic ups getting used to the operation but I am very satisfied and happy with my purchase. If you need an alternative toilet system I would highly recommend the TinyJohn !! Thanks !!

Great customer service

Joe Freymann on **May 14, 2021**

I had a few questions about installation and a minor issue with the igniter, but customer service was very helpful. I called them twice, and both times they answered my questions. I like how the Tiny John uses propane instead of a dedicated electrical outlet like the Incinolet. Sure, the Tiny John costs more, but you end up saving money in the long run because the Incinolet uses a ton of electricity. The Tiny John is also quieter.

There's a bit of a learning curve if you've never used a non-traditional toilet. For example, you need to place the liner well and yo

getting liquid outside of the liner. Also, you need to make sure that the air intake isn't blocked (I cut a special hole for it in my wall).

Overall, this is a great product for situations where a sewer connection isn't practical. If you're sitting on the fence about it (like I was for several months), just go for it.

TinyJohn in Australia

John and Amanda on **Apr 20, 2021**

We are pleased to let you know that our TinyJohn is running like a rocket, we could not be any more happier than what we have received from you all.

I got it going Friday night and it has been running all weekend and here we are Monday morning and it still running perfectly.
I must say doing what we had to do to get it going was a great benefit for myself as it taught me a lot about how it works and I understand the proper function of it now a lot better.

Amanda and I want to personally thank everybody who was involved in helping us through the install, you were great, always there, always answer the questions and supplied us with whatever part we required we could not have asked for anything better, thank you very much from both of us.

We love how hygienic is it, our old toilet system when you lifted the lid it would nearly blow you away, this is odourless, you smell nothing! it is absolutely fantastic it looks good it works well it is excellent.

We thoroughly recommend the Ecojohn incinerator toilet, it is fantastic! works well looks good and most importantly a very happy wife.

Tiny-Jon in my houseboat

Guy Gianino on **Apr 05, 2021**

I just set up my Tiny-Jon in my houseboat it went in with no problem. I hooked up the propane and plugged
it in. Set up the vent that was there from my old one, it worked like a charm.
I cant tell you what it will be like not to go in and have not pump out.
I can stay out on the boat as long as i want.

Thank you for a great product.
